

GASGAS

GAS GAS EC 250/300

GAS GAS XC 250/300

A total renewal of the brand in Enduro

Gas Gas has completely reinvented its iconic Enduro. The new EC/XC demonstrates total commitment to the very highest quality components. With new frame, engine, suspension, geometry and an endless list of new parts. A new Enduro that joins together in one unique formula the greatest reliability, top specs, versatility, easy riding and is mechanically accessible. We present the new EC/XC, a total renovation for Gas Gas in the most demanding off-road speciality: Enduro.

Classical mythology recounts that *“after being consumed by fire, the Phoenix was reborn from its own ashes, becoming a dazzling bird of fire with golden and red wings, a symbol of strength, endurance and resurrection...”*. The same metaphor of renewal from which *“Project Phoenix”* from **Gas Gas** takes its name and has given birth to the new **EC/XC**. This is a model that embodies the re-launch of the brand with more than three decades of tradition in *off-road* and high level competition. A brand which takes the best from the past to challenge the present with the power needed to reinvent itself.

GASGAS

Gas Gas is proud to present the new **Gas Gas EC/XC**, its symbol of renewal. An enduro bike that joins together in one unique formula all the ingredients for maximum reliability, top specs, confidence, versatility, easy to ride and mechanically accessible. This is an innovative bike from its very conception, designed around a central backbone frame. A structural element in combination with new geometry and top quality suspension (Kayaba front and back), giving the new **Gas Gas** weapon lightness and sensitivity in riding.

The new **Gas Gas EC/XC** has been conceived and designed for easy, quick mechanical accessibility, suitable for riders of all levels right across the broad spectrum in the world of enduro, both professional and amateur, thanks to its versatility, power and ease of riding. The new **Gas Gas EC/XC** has new geometry for a bike with a visibly lighter and narrower shape, only 105 kg, with a greater turn angle.

GASGAS

Gas Gas only trusts in the best components for its new enduro. A total commitment to the quality of the bike when taken as a whole reaches the highest peak of excellence thanks to a never-ending list of new parts in both the bike and engine. Amongst the most important, as well as the previously mentioned Kayaba suspension, are the Magura clutch cylinder, the FMF Powercore 2.1 silencer -manufactured exclusively for Gas Gas-, the Kehin PWK 38 carburettor, Excel wheels and Metzeler Six Days tyres, as well as the Nissan brake calipers and cylinders and the NG discs ... elements trusted by the big names in each part of the manufacture of competition components.

The **Gas Gas EC/XC 2018** range has a powerful new engine with a new thermodynamic. It is to be manufactured in two capacities (250/300cc), with electric start. It is going to be a delight for riders with even more performance than its two-stroke predecessors.

Sometime you have to finish an era and start a new one. Grow stronger and wiser. To re-invent oneself as an improved version, just like the new **Gas Gas EC/XC 2018**, the total renovation of **Gas Gas** in enduro.

NEW BIKE COMPONENTS:

- Kinematics
- Central backbone frame, completely redesigned, less torsional stiffness and low weight
- Aluminium sub-frame with new profiles, lighter and more resistant
- Kayaba (KYB) Ø 48 front fork, AOS (Air/Oil Separation) system, sealed cartridge, adjustable spring rate, compression and rebound
- Kayaba (KYB) monoshock with adjustable rebound and adjustable high and low speed compression.
- Greater turn angle.
- Black suspension and handlebar clamps.
- Fully redesigned aluminium alloy swingarm, optimized and lightened.
- Optimised link with wishbone and rocker system, new progressive rear suspension.
- Completely redesigned chain guide system and rollers .
- Easier chain tensioner adjustment.
- Rear axle designed for faster removal.
- EXCEL rims with silver galvanized spokes.
- NG brake discs.
- Narrower petrol tank with a large fuel capacity
- Larger air filter housing volume.
- Rapid filter removal system through the side cover number panel.
- Inlet system (filter, spider assembly, canister and nozzle).
- Narrower seat with lateral mounting covered with a larger foam base to improve comfort.
- Lighter footpegs with more grip and greater surface area.
- Nissin rear brake and slave cylinder system.
- MAGURA clutch cylinder.
- Redesign of the whole body of the motorcycle, narrower, more aggressive and more comfortable.
- Radiator grilles
- Fork protectors
- Frame protectors
- Electrical installation and distribution of its components (battery, CDI, starter relay, regulator and coil)
- New multifunction
- LED rear light and headlight

NEW ENGINE COMPONENTS:

- Motor Gas Gas EC, new thermodynamic and higher performance
- New crankshaft
- Cylinder with new distribution
- Cylinder head with new strut
- FMF Powercore 2.1 exhaust silencer designed exclusively for Gas Gas
- New refrigeration system
- Improved clutch lubrication system

GAS GAS: Off-road passion!

Since its origins in 1974, Gas Gas has always been a leader in the off-road world. This is a firm closely linked to the main national and international trial, enduro and raid competitions with a long record of success in all three events.

JACK PRICE
2016 Trial2 World Champion

JACK PEACE

2016 Trial125 World Champion
2016 Junior Trial European Champion

Gas Gas is a brand with a history forged in the toughest competitions, its competitive spirit and determination to win inspiring all the company's models, especially the new **Gas Gas TXT 300 Racing**, a world-class trial bike, and the new **Gas Gas TXT EC300 Racing**, an instant classic in the maximum category, enduro.

SANDRA GÓMEZ
2016 Women Trial World Runner-up

JONATHAN BARRAGÁN

2016 E3 Spanish Enduro Championship Runner-up

These models have grown in power and have been joined by up-and-coming members of the family, such as the new **Gas Gas Trial Contact Electric Start** or **Trial School 12** and the new children's electric vehicles, the **Gas Gas eKids T12/E12/S12**, the result of synergies between **Torrot** and **Gas Gas**.
