By choosing the new GAS GAS TXT REPLICA FACTORY 2014 you have become part of the great GAS GAS family and, as a user of the number one manufacturer of off-road motorbike, you deserve the distinguished treatment that we wish to offer to you both in our after-sale relationship and in the explanations that we provide in this manual.

Our TXT REPLICA FACTORY 2014 is a bike conceived for the practice of high-competition trial. It is actually the fruit of many years of competition and experimentation in this demanding discipline, as well as the many great successes achieved thanks to great trial riders who have contributed with their expertise to the basic data that have allowed us to create a high-level motorbike, a GAS GAS which counts on its low weight as a significant key factor.

Congratulations for making the right choice. With your skills at the commands of this motorbike, an adequate preparation and the indispensable servicing for this to be highly reliable, you will be able to enjoy the most comfortable and rewarding trial practice.

Thank you for your trust in us, and welcome to GAS GAS Motorbikes.

GAS GAS MOTOS, S.A.
April - 2014
Important notice

Read this Manual carefully. You will find it contains all the necessary information for your safety, and that of third persons, as well as guaranteeing the correct conservation and maintenance of the GAS GAS motorbike you have just bought.

You will find all the necessary instructions for the correct riding and control of this vehicle are set out below. Each message is proceeded by a sign whose meaning is the following:

Be careful! This sign introduces all those rules and precautionary measures necessary to avoid slight or severe injuries, or even the death of the user should these instructions not be correctly followed.

Look out! This sign introduces special warnings to avoid damaging your motorbike. Should these warnings not be heeded, the guarantee may be automatically invalidated.

Various notes. These are the indications necessary for the optimal control and adjustment operations, together with those tasks of conservation and maintenance of the motorbike in order that you may obtain the greatest possible satisfaction from your vehicle.

The aim of this Manual is to help the user to minimise or avoid possible damage to people, property, the environment, and naturally to his/her new motorbike. For this reason, all the information presented here is based on data obtained from the latest models put on the market just before the publication of this Manual. However, GAS GAS Motos, S.A. reserves the right to make modifications without any prior warning being given to consumers and without incurring any additional obligations in so doing. Your local dealer will also provide you with any information as might be deemed necessary.

WARRANTY TERMS AND CONDITIONS
(According to Law decree 23/2003 on the 10th of July, covering Warranties on Consumer Item Sales)

Warranty terms of the manufacturer GASGAS Motos, S.A.

The company GAS GAS MOTOS, S.A. (hereafter referred to as “GG”), with this present document guarantees the consumer, the purchaser of a vehicle manufactured by GG, that both the materials and the manufacturing are free of defects in accordance with the highest standards of quality. Consequently, GG with this document guarantees the consumer (hereafter referred to as the “purchaser”), in accordance with the conditions set out below, the repair, free of charge, of any defect in materials or that might result from faulty manufacture that is detected in a new motorcycle within the period covered by this Warranty and with no limit on the number of kilometres covered or hours of use.

Warranty Period

The period covered by this Warranty will begin on the day of delivery of the vehicle to the purchaser by a GG authorised dealer, or in the case of demonstration models, on the date in which the vehicle is used for the first time. The seller will be responsible for any unwarranted faults that become apparent within the period established in the Law decree 23/2003 on the 10th of July covering Warranties on Consumer Goods Sold from the time of delivery and in accordance with the Directive 1999/44/EC for other members of the European Community. For countries outside the European Community, the Warranty Period will be determined by the existing regulations in those countries. Nevertheless, should the fault appear during the first six months after the delivery of the motorcycle, it will be presumed that the said fault existed at the time of delivery; from the end of the sixth month onwards, the purchaser must demonstrate that the unwarranted fault existed at the moment of delivery. During the first six months subsequent to the delivery of the repaired vehicle, the seller will be responsible for any unwarranted faults arising out of the repair.

Any defects detected in the product must be brought to the attention of a GG authorised dealer within the Warranty Period. If the last day of this period is a Sunday or an official holiday, the Warranty period will be extended such that the last day of the period covered will be the first working day after the Sunday or official holiday.

Those claims under Warranty for defects not brought to the attention of a GG authorised dealer before the end of the Warranty Period will be excluded.
Obligation of the purchaser

GG will have the right to reject any claims under Warranty in the event that:

a) The purchaser has failed to submit the vehicle to any of the inspections and/or maintenance work required in the Users’ Manual, or has exceeded the date set for such inspections or maintenance work. Also excluded from guarantee are those faults that appeared prior to the dates established for an inspection or maintenance work where the latter was not carried out, or was carried out later than the date established.
b) An inspection, maintenance or repair has been performed on the vehicle by third parties not recognised or authorised by GG.
c) Any maintenance or repair has been carried out on the vehicle that violates the technical requirements, specifications and/or instructions indicated by the manufacturer.
d) Spare parts whose use has not been authorised by GG have been used during the course of maintenance work or repairs to the vehicle, or in the event that the vehicle has been used with fuels, lubricants or other liquids (including, amongst others, cleaning products) that have not been expressly mentioned in the specifications set out in the User’s Manual.
e) The vehicle has been altered or modified in any way or fitted with components other than those expressly authorised by GG as accepted components of the vehicle.
f) The vehicle has been stored or transported in a way that is not in accordance to the corresponding technical requirements.
g) The vehicle has been used for special purposes other than ordinary use, such as competition, races or record breaking attempts.
h) The vehicle has been directly or indirectly damaged as a result of a fall or an accident.

Warranty exclusions
The following items are not covered by this Warranty:

a) Worn parts, including, without any limitation, spark plugs, batteries, petrol filters, oil filter elements, (secondary) chains, engine output pinions, rear sprockets, air filters, brake discs, brake pads, clutch plates and discs, bulbs, fuses, carbon brushes, footrest rubbers, tyres, inner tubes, cables and other rubber components
b) Lubricants (for example, oil, grease, etc.) and working fluids (for example, battery liquid, coolant, etc.)
c) Inspection, adjustments and other maintenance tasks, as well as all kinds of cleaning work
d) Damage to the paint-work and consequent corrosion due to external causes, such as stones, salt, industrial fumes and other environmental impact, or inadequate cleaning with inappropriate products
e) Any damages caused as a result of the defects, as well as any expenses incurred either directly or indirectly as a consequence of the defects (for example, communication costs, accommodation expenses, car hire costs, public transport costs, breakdown truck fees, courier costs, etc.), as well as other financial losses (for example, those caused by the loss of the use of the vehicle, loss of income, time lost, etc.)

f) Any acoustic or aesthetic phenomenon that does not significantly affect the condition or use of the motorcycle (for example, small or hidden imperfections, noise or vibrations that are normal in use, etc.)

g) Phenomena that are the result of the ageing of the vehicle (for example, discolouring of painted or metallic coated surfaces).

Various

1.- GG shall have the prerogative to decide, at its own discretion, whether to repair or replace defective parts. Where parts are replaced, ownership of the parts removed shall pass to GG without any other consideration. The GG authorised dealer, to whom the making good of the defects has been entrusted, is not authorised to make any declarations that are binding on GG.

2.- In case of doubt regarding the existence of a defect, or a visual or material inspection is required, GG reserves the right to demand the return of the parts which are the object of a claim under Warranty, or to arrange an inspection of the defect by an expert from GG. Any additional obligations arising out of guarantees on parts replaced free of charge, or any other service rendered free of charge, are excluded from the effects of this present warranty. The Warranty on parts replaced within the Warranty Period will end at the expiry date for the Warranty Period of the product concerned.

3.- Should it prove to be the case that a defect cannot be repaired, the purchaser guaranteed shall have the right to the cancellation of the contract (payment of compensation) or a partial refund of the purchase price (discount), instead of repairing the motorcycle.

4.- Any claims against Warranty by the purchaser under the terms of the sale contract with the corresponding authorised dealer shall not be affected by the terms of this present Warranty. Neither will this present Warranty affect those additional contractual rights acquired by the purchaser under the general commercial terms and conditions of the authorised dealer. However, such additional rights may only be exercised through claims against the authorised dealer.

5.- Should the purchaser resell the product within the Warranty Period, the duration and conditions of the present Warranty will remain unaltered, in such a way that the rights to make claims under the present Warranty in accordance with the terms and conditions set out in this present document shall be transferred to the new owner of the motorcycle.
Recommendations for the reliable operation of your GAS GAS.

• Eight hours of running-in are recommended in order to guarantee the correct operation of the engine.

• It is important to warm the engine to the optimum operation temperature every time the motorbike is used.

• Synthetic or semi-synthetic 2-stroke oil should be used at 2% in the oil/petrol mix.
### TECHNICAL SPECIFICATIONS

#### ENGINE

2 stroke, single cylinder, direct reed valve crankcase induction. Liquid cooled.

**250 cc. engine**
- Cylinder size: 247.7 cc.
- Bore and stroke: 72.5 x 60 mm.

**280 cc. engine**
- Cylinder size: 272.2 cc.
- Bore and stroke: 76 x 60 mm.

**300 cc. engine**
- Cylinder size: 294.1 cc.
- Bore and stroke: 79 x 60 mm.

Carburetor, diameter of the diffuser: 28
Lubrication system: Mixture (50:1)(2%)
Ignition system: Digital magnetic flywheel CDI

#### TRANSMISSION

Transmission type: 6 gears, Four / Six system by GAS GAS* (Patented).
Clutch type: Hydraulic command, 1/3 discs, variable progressive with diaphragm system by GAS GAS* (Patented).
Final drive system: By chain

**NOTE:** (*) Inspect or do this operations only it’s necessary.
Enter the vehicle identification number (serial number), the particulars shown on the model label, and the ignition-key identification number in the spaces provided, in order to simplify your future orders for spare parts or as a useful reference in the event of your vehicle being stolen.

**Serial number (A)**
This has been printed on the steering tube. It shows the frame number used for registering this machine.

**Homologation plate (B)**
The motorcycle carries a certification plate showing a serial number that has also been printed on the front, and this information must coincide with that contained in the vehicle documents. We recommend that this information be entered in the box below.

**Key identification numbers**
The motorcycle carries one key set. The identification number appears right on the key joints. This number may be quoted when ordering a spare to replace a lost key. (except some racing models)
The control panel includes lighting, turn signal, horn and engine stop switches.

The indicator control has been located on the underside of the left-hand grip. This is an orange-colour button. To start the right-hand indicator, move this switch to the right; and likewise, to start the left-hand indicator, move this switch to the left.

All light controls have been located on the left-hand grip; the various positions available are reached by sliding the main switch, which is on the left end of the grip.
Located under the suspension lower right side bracket. For correct operation, it is necessary to turn the handlebar completely towards the right until it stops, insert the key in the slot, turn it in counterclockwise direction, press and to turn it again in clockwise direction. The key can now be removed and the steering will remain locked.

Never leave the key in the lock. If the steering is turned with the key in the lock it may be damaged and the locking system could be damaged.

Fuel tank capacity : 2,4 liters

Use premium gasoline with an octane rating equal to or higher than that shown in the table.

<table>
<thead>
<tr>
<th>OCTANE RATING METHOD</th>
<th>MINIMUM RATING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Antiknock Index (RON + MON)/2</td>

</tr>
<tr>
<td>Research Octane No. (RON)</td>
<td>98</td>
</tr>
</tbody>
</table>

Gasoline is extremely flammable and can be explosive under certain conditions. Always stop the engine and do not smoke. Make sure the area is well ventilated and free from any source of flame or sparks; this includes any appliance with a pilot light.

Never mix vegetal and mineral oils together. Too much oil may be cause an excessive amount of fumes and spark-plug dirt. Too little oil may cause engine damage or early wear.
This engine is designed to burn a mixture of combustible fuels, lead free petrol and oil.

The fuel tank cap is of the quick release type. To open the cap, lift the tab and turn it 1/4 turn in counterclockwise direction. To close it, place cap with the words GAS GAS in the upper position, and turn the tab in clockwise direction. It is important to check periodically the condition of the cap sealing O’ring to insure proper sealing.
The idle and petrol-air mixture can be adjusted by the screw as shown in the illustration.

The choke (B) is a device for aiding the starting when cold. The engine will reach a normal temperature in a short time and it won’t damage anything.

The position of the fuel tap (A) must be pointing down for normal operation. When turned forwards, it opens the reserve, to the rear turns off the fuel.
Like the clutch lever, the front brake lever must be in the ideal position. Again, the play must not exceed 3mm. This play must never be eliminated.

The clutch lever must be adjusted to your liking, but the free play should not exceed 3mm. This play must never be eliminated.

This is the position the kick-start should be in when not being used.
The engine crankcase drain cap is situated on the lower left-hand side. The drainage hole in the crankcase allows emptying.

Engine Oil capacity 400cc.

To check the oil level, first make sure the motorbike is perpendicular to the ground. If the bike has been in use, wait a few minutes. To check the oil level, (B) and examine the level of oil using the window. The level should be in the middle of the window. If it is too high, drain the excess. If it is too low, add the necessary quantity by opening the oil cap. Use the same type and make of lubricant as that which is already in the engine.

When topping up the oil, open the cap (A).
It is important to periodically check the air filter. Open the door on the motorbike as shown in the photo. Remove the screw and get the internal cover off. Clean with water and detergent, then dry and lubricate with oil designed for filters. Ensure its correct installation once clean. In the lower part of the filter chamber there is a leaf that acts as the escape valve for the liquids and/or other materials that may build up in the filter chamber. Check that this valve is working properly.
When filling the radiator, use cooling fluid designed for lightweight alloy motors.

The engine must be cool before removing the radiator cap or when replacing radiator coolant, or severe scalding may result.

---

Remove the fuel tank, located in the upper area of the chassis, before servicing the motor or any other internal part of the motorcycle. To do this, first check that the gasoline cap and fuel cock are closed properly. Next pull out the fuel tube end (A) which is inserted in the fuel cock. The third step is to unscrew the Allen screw M6 (B) fastening the front upper part of the tank. Once the fuel tank is released, lift it at the front section and remove the tank completely out of the chassis (C).
It is necessary to periodically check the spark plug condition. This must be done removing the spark plug from the upper part of the cylinder head. First disconnect the spark plug cap and remove area first. Clean the spark plug with compressed air to remove dirt and prevent foreign material from entering inside the engine compartment.

The sparking plug distance should be between 0.6 and 0.7 mm.

0.6 ± 0.7 mm.
To carry out any type of operations on and improve access to the carburetor, it is recommended to remove the filter box. You must follow these steps:

1. Loosen the admission port clamp.
2. Unscrew 4 tapered Allen screws M6 which are used to anchor the filter box to the chassis.
3. Pull the filter box straight up just enough until the rear wiring connector is visible.
4. Disconnect the connector (Fig. 1).
5. Remove the filter box completely (Fig. 2).

The carburetor is now exposed and can be separated from the motor assembly by loosening the reed port clamp.

Loosen the two screws of the carburetor cap to allow the removal of the body to prepare it for cleaning (Fig. 3).
It is necessary to clean the carburetor very thoroughly. To do so use compressed air.

Dismantle and clean periodically the main nozzle after washing the bike, as well as cleaning the inside of the carburetor housing.

It is important to check the level of petrol within the carburetor. The float should be at 18.5mm.

Extreme precautions must be taken to dry the inside of the carburetor thoroughly.

Water droplets, dirt, or other foreign material may enter and damage the reed box and consequently cause damages to the piston and cylinder assembly.
Since this is the last point of access to the inside of the cylinder, special precautions must be taken to keep it in good condition and to monitor its performance periodically. Cover the cylinder bore with a clean shop towel to prevent foreign material from entering the compartment when handling these parts.

The reed valve is composed of a body, the plates and the stops. To inspect the assembly remove it by removing the 4 screws which attach it to the rear of the left and right crankcases.

The distance between reeds and the reed keeper should be 6.5 mm for all types of displacement models. Reeds must be kept in perfect conditions with no signs of nicks, scratches, broken or folded sections. Otherwise, the reed assembly must be replaced with a new one.
After any removal or assembly operations on the clutch air trapped inside must be purged by connecting wrench (spanner) and bleeding the system.

Check clutch discs for possible wear after many hours of use. For correct operation the minimum measurement should be 9,8 mm.
For a medium weight of 75 Kg, we should preload the spring to 5 turns.

*Measure without the spring and the hydraulic rod compressed
The front suspension is adjusted manually

A- Right (hydraulic extension).
B- Left (spring preload).

The suspension features a setting for the hydraulic end stop brake in compression. This setting is located at the bottom of the left-hand bottle (A). With the SAE 5 oil included ex-works, you are commended to keep it closed (B).

The preload on the shock absorber is adjusted by turning the toothed rings (C) with the aid of two special spanners. Starting from the standard preload of 8 mm, tighten it up or loosen it off depending on the weight of the rider (see springs and preloads table). Preload refers to the difference in length in mm between the spring when compressed and at rest.
Adjust the compression with control (C) and the special Reiger tool. The standard position is 13 clicks from closed. Opening up this setting increases sensitivity, so that the suspension will be felt to harden later.

Closing this setting means hard impacts will be absorbed better, i.e. the suspension will be felt to harden sooner.

It is advisable to work with a maximum of 5 clicks on either side of the standard position.

Adjust the rebound or extension by means of screw (D). The standard position is 32 clicks from closed. From this starting position, open up clicks to get a faster extension or rebound, and close up clicks to get a slower extension or rebound. It is advisable to work with a maximum of 10 clicks on either side of the standard position.

### REIGER SHOCK ABSORBER

**IDEAL PRELOADS AND SPRINGS DEPENDING ON RIDER WEIGHT**

Production
It is very important to periodically remove and verify the condition of the swingarm bearings and pieces.

The linkage at the lower part of rear suspension must be periodically cleaned, inspected and lubricated with grease.
Special oil to lubricate the following:

1) All pivot points of the brake and clutch levers.

2) The pivot of the gear shift lever.

3) Also the rear brake pedal (bearings).

4) Apply grease to the footrest springs and fixtures.
5) Apply grease to the linkage of the engine starting pedal.

6) The drive chain must be cleaned and lubricated thoroughly and frequently since it is exposed to the elements and constant abrasion.

7) Lubricate the handlebar with a fine coat of oil to allow smooth operation of the throttle control.
8) It is also recommended to frequently lubricate the chain tensioner spring because it is under great stress.

9) Oil and clean the throttle control frequently; it is especially recommended to do so after the bike has been cleaned with water under high pressure.
To regulate the chain slack and center the rear wheel use the shaft excentrics which can be easily adjusted.

The chain master link clip must be placed in opposite direction of the wheel travel.
Tyre pressure should be checked periodically to insure the best.

Front wheel pressure:
- 0,450 bar - normal
- 0,420 bar - competition

Rear wheel pressure:
- 0,350 bar - normal
- 0,300 bar - competition

Fig. 1 - Bad condition
Fig. 2 - Good condition

Front tyre:
2,75 x 21” TRIAL

Rear tyre:
4,00 x 18” TRIAL (tubeless)
Brake pad wear, front and rear, must be checked from time to time to insure an efficient braking power under all circumstances.

The front brake fluid level can be verified through the transparent inspection window.

The brake calipers have been furnished with bleeder valves to eliminate the air trapped in the brake system.
The rear brake fluid reservoir is located at the cylinder support. Verify fluid level periodically and refill if necessary.

To verify the reservoir level you must remove the fuel tank, and place the oil reservoir in horizontal position to check the real fluid level. Must be filled between the marks MIN & MAX.

STORAGE

For extended storage of the motorcycle, you must do the following:

- Clean the motorcycle thoroughly.
- Start the engine for about 5 minutes to warm up the transmission oil and then drain it (see “crankcase drain cap” page 22).
- Fill with new transmission oil.
- Empty the fuel tank (gasoline will deteriorate if left too long).
- Lubricate the chain and all cables.
- Cover all unpainted metal surfaces with a coat of oil to prevent rust, do not apply oil to the brakes and rubber parts.
- Cover the exhaust pipe with a plastic bag to prevent corrosion.
- Place the motorcycle in such a position so that the wheels do not touch the ground (if possible, place cardboard under the wheels).
- Cover the motorcycle to protect it from dust and dirt.

When starting off after an extended storage:

- Remove the plastic bag from the exhaust pipe.
- Tighten the spark plug.
- Fill the fuel tank.
- General lubrication.
- Inspect tyre pressure and inflate to the specified pressure, if necessary.

To avoid excessive ageing of the plastic parts and other washable pieces of the motorcycle, it is suggested that these items must be washed carefully. If the washer applies water at high pressure and/or temperature, take the precaution of maintaining the washer outlet gun at a distance of 30 centimeters minimum, this will insure the correct gloss of the plastics and adherence of the self-adhesive labels that decorate the motorcycle.
**Multifunction gauge** (Only on certain models and markets)

The multifunction device is water resistant, has 3 buttons with a brightly lit LCD.

- Current speed
- Backlight Full time
- Average speed
- Maximum speed
- Two independent trip meters
- Odómeter (total kms)
- Time on motorcycle
- Chronometer
- Tracking total hours
- Clock
- Maintenance Reminder
- Travel Distance

**WARNING**

The multifunction device is water resistant but not waterproof. Do not wash with pressure washer. Do not leave the device in direct sunlight when the motorcycle is stopped. Avoid contact with gasoline, degreasers or other cleaning chemical products that could be cause damages in the device. Always remember to pay attention to the road when you’re driving.

**QUICK GUIDE: SETUP MENU**

To enter into the setup menu Endurance II, hold buttons 1, 2 and 3 for three seconds. Be sure to hold the 3 buttons at the same time.

**BUTTONS SUMMARY:**

- Button 1: Increase (above)
- Button 2: Decrease (below)
- Button 3: Next configuration
ADJUSTING the distance units:
Select the units (kilometers or miles) with 1 or 2 buttons.

SET the front tire size:
Select the size with button 1 or 2 (2300m).

ADJUST the clock format:
Select the desired format using the buttons 1 or 2 (12H or 24H).

SETTING the time:
Set the clock to the desired time by pressing 1 to 2.

SETTING the maintenance reminder method:
Select the desired maintenance reminder method using the buttons 1 or 2.
ODO: Odometer. kilometers based.
ART: Accumulated driving time, hours based.

SETTING the maintenance reminder:
Select the value until the next maintenance.
This value is based on time or mileage, depending on the method chosen on the previous menu (ODO/ART).
SCREENS IN NORMAL MODE: Screen 1: DST

DST (Distance Traveled). DST function accumulates the distance data since the last reset while you’re riding a motorcycle.
Press and hold buttons 1 and 2 for three seconds to reset DST (Distance 1).
Hold the button 3 to set the DST. Use buttons 1 and 2 to increase and decrease the DST.
Press the 3 button to return to main menu.

Screen 2: DST2

DST2 (Distance Traveled 2). The multifunction ENDURANCE II, can accumulate data from two different travel distances.
Press and hold buttons 1 and 2 for three seconds to reset DST2, driving time and average speed.
Hold the button 3 to set the DST.
Use buttons 1 and 2 to increase and decrease the DST.
Press the 3 button to return to main menu.
TROUBLESHOOTING

FINAL RECOMMENDATIONS

PREVENTIVE ADVICE
Before you ride the vehicle, take all the time you may require to check your motorcycle, carry out the periodical upkeep and check all functions. In different sections of this manual you will find data and work specifications that must be done at an authorized GAS GAS dealer, because of this and to extend the useful life of the motorcycle, all periodical inspections must be carried out by specially trained professionals at a GAS GAS Post-Sale Service Shop.

Poor maintenance work of the motorcycle or not taking proper care of any problem, even if its is a small concern, can cause severe personal injury and may lead to death.

To avoid excessive ageing of the plastic parts and other washable pieces of the motorcycle, it is suggested that these items must be washed carefully. If the washer applies water at high pressure and/or temperature, take the precaution of maintaining the washer outlet gun at a distance of 30 centimeters minimum, this will insure the correct gloss of the plastics and adherence of the self-adhesive labels that decorate the motorcycle.

SAFE RIDING OF THIS MOTORCYCLE
Safe riding of a motorcycle does not only depend on the vehicle. The driver's intelligence and common sense are key factors to be taken into consideration. It is recommended that you practice your favorite sport wearing all the necessary safety equipment (helmet, protection gear, boots, etc.).

LEGAL ADVICE
In the interest of technical development we reserve the right to modify the construction, the equipment and accessories of the motorcycle. It is understood that all measurements, weights and power data must include their respective tolerances. The photographs included in this manual may not match the model you have purchased. The descriptions and the illustrations may vary depending on the volume of equipment and accessories of your motorcycle and also of the versions exported. Because of this, there can be no liability in case of errors, misprint or omission.

GAS GAS MOTOS, S.A. reserves the right to make changes and/or modifications at any time without notice.
HOMOLOGATION (Only for homologated version)

The vehicle you have just acquired has been homologated under the directives of the EU and complies with all the homologation requirements demanded.

Compulsory homologation elements required, among others, when travelling on a public road and to meet periodical vehicle inspection approval at state controlled plants are listed below.

Among other requirements, all homologation components are identified with a determined and registered mark.

<table>

</tbody>
</table>

Each one of the homologation components must form part of the vehicle and in case of loss, breakage or malfunction it is recommended that the owner contact his official dealer to correct this problem.

Besides the homologated vehicle you have received a complementary kit for a racing version of this same vehicle. Be advised that this version is not homologated.
